<b>Preface</b>	xiii
<b>1 Introduction</b>	3
<b>1.1 An Overview of the Observations</b>	7
• Stars	8
• The Galaxy	13
• Other galaxies	16
• Open and globular clusters	24
• Groups and clusters of galaxies	26
• Galactic nuclei	29
<b>2 Potential Theory</b>	30
• General results	30
<b>2.1 Spherical systems</b>	34
• Newton's theorems	34
• Potentials of some simple systems	37
<b>2.2 Potential-Density Pairs for Flattened Systems</b>	42
• Plummer-Kuzmin models	42
• Logarithmic potentials	45
• Poisson's equation in very flattened systems	48
<b>2.3 Ellipsoidal Systems</b>	49
• Axisymmetric systems	49
• Triaxial systems	60
<b>2.4 Multipole Expansion</b>	62
<b>2.5 Potential Energy Tensors</b>	67
<b>2.6 Potentials of Disks</b>	70
• Disks as flattened spheroids	70
• Disk potentials via elliptic integrals	72
• Disk potentials via Bessel functions	74
• Potentials of non-axisymmetric disks	80
<b>2.7 The Potential of Our Galaxy</b>	84
<b>2.8 Numerical Methods</b>	90
<b>Problems</b>	99

<b>3 The Orbits of Stars</b>	103
<b>3.1 Orbits in Static Spherical Potentials</b>	103
• Constants and integrals of the motion	110
<b>3.2 Orbits in Axisymmetric Potentials</b>	114
• Motion in the meridional plane	114
• Surfaces of section	117
• Nearly circular orbits: epicycles and the velocity ellipsoid	120
<b>3.3 Orbits in Planar Non-Axisymmetric Potentials</b>	126
• Two-dimensional nonrotating potential	126
• Two-dimensional rotating potential	135
• Weak bars	146
<b>3.4 Orbits in Three-Dimensional Triaxial Potentials</b>	153
• Nonrotating potentials	153
• Rotating potentials	154
<b>3.5 The Phase-Space Structure of Orbits</b>	156
• Orbits in Stäckel potentials	157
• Structure of regular orbits in general potentials	168
• Irregular orbits	172
<b>3.6 Slowly Varying Potentials</b>	177
<b>Problems</b>	183
<b>4 Equilibria of Collisionless Systems</b>	187
• The relaxation time	187
<b>4.1 The Collisionless Boltzmann Equation</b>	190
• The coarse-grained distribution function	194
<b>4.2 The Jeans Equations</b>	195
• Applications of the Jeans equations	198
<b>4.3 The Virial Equations</b>	211
<b>4.4 The Jeans Theorems and Spherical Systems</b>	219
• Jeans theorems	220
• Jeans theorems applied to spherical systems	221
• Systems with isotropic dispersion tensors	222
• Systems with anisotropic dispersion tensors	239
• The differential energy distribution	242
<b>4.5 Axisymmetric Systems</b>	245
• Planar systems	245
• Three-dimensional systems with $f(\mathcal{E}, L_z)$	249
• Axisymmetric systems involving third integrals	252

<b>4.6 Triaxial Systems</b>	256
• Equilibrium bodies of incompressible fluid	257
• Systems with distribution functions $f(E_J)$	262
• Freeman's analytic bars	264
• General triaxial systems	265
<b>4.7 The Choice of Equilibrium</b>	266
• The principle of maximum entropy	267
• Phase mixing and violent relaxation	269
• Numerical simulation of the relaxation process	273
<b>Problems</b>	279
<b>5 Stability of Collisionless Systems</b>	283
• Mathematical preliminaries	285
<b>5.1 The Jeans Instability</b>	287
• Physical basis of the Jeans instability	288
• The Jeans instability for a fluid	289
• The Jeans instability for a stellar system	291
• Discussion	294
<b>5.2 The Stability of Spherical Systems</b>	296
• Stability of barotropic stars	297
• Stability of stellar systems	302
<b>5.3 The Stability of Uniformly Rotating Systems</b>	310
• The uniformly rotating sheet	310
• Maclaurin disks	315
• Kalnajs disks	322
• Maclaurin spheroids	326
• Comparison of stellar and fluid systems	328
• Secular instabilities	329
<b>5.4 Summary</b>	331
<b>Problems</b>	332
<b>6 Disk Dynamics and Spiral Structure</b>	336
<b>6.1 Introduction</b>	337
• Observations	337
• The winding problem	345
<b>6.2 Wave Mechanics of Differentially Rotating Disks</b>	347
• Preliminaries	347
• The dispersion relation for tightly wound spiral arms	352
• Local stability of differentially rotating disks	362
• Long waves, short waves, and group velocity	365
<b>6.3 Global Stability of Differentially Rotating Disks</b>	370
• Numerical work on disk stability	371
• Swing amplifier and feedback loops	375
• Summary	383

<b>6.4 Theories of Spiral Structure</b>	383
• The Lin-Shu hypothesis	384
• Other density wave theories	391
• Other theories	394
• Summary	398
<b>6.5 Bars</b>	399
• Bars as stellar systems	401
• Gas dynamics in barred spiral galaxies	403
• Summary	405
<b>6.6 Warps</b>	406
<b>Problems</b>	413
<b>7 Collisions and Encounters of Stellar Systems</b>	417
<b>7.1 Dynamical Friction</b>	420
• Applications of dynamical friction	427
<b>7.2 High-Speed Encounters</b>	432
• Applications of the impulse approximation	440
<b>7.3 Tidal Radii</b>	450
<b>7.4 Mergers</b>	453
• Encounters between spherical galaxies	454
• Mergers of spinning galaxies	457
• Observations of galaxy mergers	463
<b>7.5 Encounters in Stellar Disks</b>	470
• Scattering of disk stars by molecular clouds	473
• Scattering of disk stars by spiral arms	478
• Summary	484
<b>Problems</b>	484
<b>8 Kinetic Theory</b>	489
<b>8.1 Exact Results</b>	494
• Virial theorem	494
• Liouville's theorem	496
• The BBGKY hierarchy	497
<b>8.2 The Gravothermal Catastrophe</b>	500
<b>8.3 The Fokker-Planck Approximation</b>	506
• Master equation	506
• Fokker-Planck equation	507
• Diffusion coefficients	510
• Relaxation time	514
• Numerical solutions of the Fokker-Planck equation	515

<b>8.4 The Evolution of Spherical Stellar Systems</b>	520
• Evaporation and ejection	523
• Equipartition	531
• Inelastic encounters	539
• Influence of a central black hole	545
• Core collapse	526
• Binary stars	533
• Binaries and core collapse	543
<b>8.5 Summary</b>	548
<b>Problems</b>	548
<b>9 Stellar Evolution in Galaxies</b>	552
<b>9.1 Luminosity and Color Evolution of Galaxies</b>	552
• Elliptical galaxies	552
• Observations	558
• Spiral galaxies	555
<b>9.2 Chemical Evolution of Disk Galaxies</b>	564
• The one-zone model	565
• The accretion model	571
• Relationship between metallicity and age	574
• Summary	577
• The disk-spheroid model	569
<b>9.3 Early Evolution of Spheroidal Components</b>	578
• Inflows and outflows	578
• Spheroidal components	582
• Summary	587
• Chemical enrichment of	
<b>Problems</b>	588
<b>10 Dark Matter</b>	589
<b>10.1 Dark Matter in Individual Galaxies</b>	592
• The solar neighborhood	592
• Elliptical galaxies	593
• The Magellanic Stream	597
• Other probes	603
• The central regions of	
• The dynamics of Population II tracers	594
• The Magellanic Stream	597
• Rotation curves of galaxies	598
<b>10.2 Dark Matter in Systems of Galaxies</b>	605
• Timing the Local Group	605
• Groups of galaxies	610
• Clusters of galaxies	614
• Binary galaxies	607
<b>10.3 Dark Matter in Cosmology</b>	617
• The mean luminosity density of the Universe	617
• Is $\Omega_0 = 1$ ?	626
• Virgocentric flow	618
• Gravitational lenses	622
• Primordial nucleosynthesis	623
• The age of the Universe	626

<b>10.4 The Composition of the Dark Matter</b>	629
• Dark matter in baryons	629
• Other kinds of dark matter	632
• New physics	635
<b>10.5 Summary</b>	638
<b>Problems</b>	638
<b>Appendixes</b>	643
<b>Appendix 1.A Useful Numbers</b>	643
• Physical constants	643
• Astronomical constants	643
• Useful relations	644
<b>Appendix 1.B Mathematical Background</b>	644
• Vectors	644
• Curvilinear coordinate systems	645
• Vector calculus	648
• Abel's integral equation	651
• Calculus of variations	652
<b>Appendix 1.C Special Functions</b>	652
• Dirac delta function	652
• Factorial or gamma function	653
• Error function	653
• Elliptic integrals	654
• Associated Legendre functions	654
• Spherical harmonics	655
• Bessel functions	656
<b>Appendix 1.D Mechanics</b>	658
• Single particles	659
• Systems of particles	660
• Lagrange's equations	663
• Hamiltonian dynamics	664
<b>Appendix 1.E Fluid Mechanics</b>	670
• Basic equations	671
• Sound waves	673
• The ideal gas	674
• Group velocity	675
<b>Appendix 4.A Proof of Special Jeans Theorem</b>	676
<b>Appendix 4.B <math>N</math>-Body Program</b>	678
<b>Appendix 5.A Modes of an Infinite Stellar System</b>	681
<b>Appendix 5.B Perturbation Energy in Fluid Systems</b>	686
<b>Appendix 5.C The Antonov-Lebovitz Theorem</b>	687
<b>Appendix 6.A Derivation of the Reduction Factor</b>	689
<b>Appendix 8.A The Diffusion Coefficients</b>	693
<b>Appendix 8.B The Equilibrium Soft Binary Distribution</b>	698
